

RAJAVARSHAN M

B.Tech Computer Science Engineering (Cyber Security) • VIT Vellore
rajavarshan393@gmail.com | +91 9445555166 | India | LinkedIn | GitHub

OBJECTIVE

Computer Science Engineering student at VIT Vellore (CGPA: 9.28) with hands-on experience in frontend web development, object-oriented programming, and software engineering fundamentals. Proficient in Java, C++, and JavaScript with experience building and deploying real-world applications. Seeking a software engineering internship to apply technical skills, contribute to real-world projects, and grow within a collaborative team environment.

EDUCATION

B.Tech in CSE (Cyber Security) | CGPA: 9.28 | Vellore Institute of Technology, Vellore 2024 – 2028

Coursework: Data Structures & Algorithms, DBMS Basics

Higher Secondary Education | 90% | Ithaka International School, Nellore, Andhra Pradesh 2022 – 2024

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML, CSS, SQL, C, C++

Frameworks & Libraries: React, Vite

Tools & Platforms: Git, GitHub, VS Code, Vercel

CS Fundamentals: Data Structures & Algorithms, OOP, DBMS Basics

Soft Skills: Problem Solving, Team Collaboration, Communication, Analytical Thinking, Adaptability, Time Management, Attention to Detail

PROJECT EXPERIENCE

RentIt – Rental Marketplace Web Application

React, Vite, JavaScript, HTML5, CSS3

- Architected a component-based React and Vite marketplace application, structuring 7+ reusable UI modules (listings, profile, dashboard) to improve maintainability and scalability.
- Engineered responsive Browse Listings and Item Details pages with dynamic search and filtering, enabling users to navigate rental inventory efficiently across devices.
- Built signup/login and profile management UI screens with form validation, delivering a smooth onboarding experience on the frontend.
- Optimized build and load performance using Vite's fast HMR and bundling, reducing development iteration time compared to traditional bundlers.
- Designed a responsive, mobile-first layout using CSS3 and HTML5 semantics, ensuring consistent UI rendering across desktop and mobile breakpoints.
- Deployed the application on Vercel with continuous integration from GitHub, enabling fast, reliable production releases.

Deepfake Detection System

Python

- Built an AI-powered deepfake detection system that analyzes uploaded images and videos to identify manipulated facial content.
- Designed an interactive web interface allowing users to upload media and receive predictions on whether content is real or manipulated.

- Applied a deep learning-based approach for face detection and classification, with a modular Python codebase for preprocessing and inference.

Personal Finance Management System

C++, OOP

- Built a C++-based budgeting and transaction tracking application using OOP principles, with user authentication and input validation.
- Designed class-based architecture with encapsulation to model budgets and transactions, promoting modular and reusable code.
- Implemented structured error handling and input validation to ensure reliable data entry and prevent invalid transactions.
- Organized the codebase into clean, menu-driven modules to improve readability, maintainability, and future scalability.

ACHIEVEMENTS

- Maintained CGPA of 9.28, reflecting academic excellence; scored 90% in Higher Secondary Education and participated in inter-college hackathons building functional prototypes under time constraints.
- Built and deployed personal projects using Python, JavaScript, C++, React, and Vite; certified as a HackerRank Software Engineer Intern.
